SUMMARY

Backend Software Engineer with 4+ years of experience building cloud-native systems, container technologies, and AI-driven automation. I specialize in Go, Infrastructure as Code with AWS CDK, and developing optimized container AMIs. I've contributed to open-source projects such as [Finch](#), [Nerdtctl](#), and [SOCL](#), improving container-pull performance and delivering impact at scale. Seeking backend engineering roles focused on building high-impact, user-centered products that demand reliability, performance, and cloud-native expertise.

EDUCATION

Master of Science, Information Systems *Northeastern University, Boston, MA*

Networks and Cloud Computing, Object Oriented Programming, Blockchain and cryptocurrencies, Data Management Database Design

Bachelor of Engineering, Information Science *Visvesvaraya Technological University, India*

Software Design Patterns, Database Applications, Mobile Application Development, Fullstack Web Development

EXPERIENCE

Amazon Web Services (AWS) | *Software Development Engineer – Containers & Infrastructure*

Jan 2024 – Present

- Led major contributions to Finch and finch-daemon, delivering Docker-feature parity and enabling Amazon-wide adoption; helped **avoid \$11M+ annually in licensing costs** while improving reliability and developer experience at scale
- Integrated SageMaker with SOCI to accelerate large-model container pulls, achieving up to **65% faster startup times** and significantly reducing latency for high-volume ML training and inference workloads
- Developed optimized Windows container AMIs for EKS, ECS, and Fargate, contributing to ongoing efforts that show **up to 50% reduction** in non-OOBE node startup times, improving cluster scalability and provisioning efficiency
- Implemented **healthcheck functionality in nerdctl**, strengthening container lifecycle management and improving reliability for teams adopting non-Docker container runtimes
- Built **AI agents, personas, and MCP servers** integrated with AWS developer tooling, reducing manual release workflows from 15 steps to 4 CLI commands and **shrinking release cycle timeline by 80%**
- Designed and deployed internal platforms using AWS CDK (Lambda, S3, RDS, EventBridge, QuickSight, Secrets Manager), cutting release-time overhead by 50% and improving team-wide observability and automation

Amazon Web Services (AWS) | *SDE Intern (serverless containers)*

May 2023 – Aug 2023

- Improved CLIs with customization command flags, integrated benchmarker into GitHub Actions for code merge automation and introduced a workflow **saving ~2000 GitHub runner minutes** every month
- Enhanced the credential helper for soci-snapshotter, an open source software managed by AWS, to ensure compatibility with a wider range of registries including Docker, GCP, and Azure

Cybrilla Technologies | *Software Engineer – Full Stack*

Jul 2019 – Dec 2021

- Optimized ledger maintenance queries with indexing and database sharding techniques, **reducing search query time by 10%**, **increasing customer satisfaction by 30%**, and earning positive social media reviews through improved user experience
- Engineered e-KYC feature for browser-based video recording and uploading, **lowering onboarding failure rate from 50% to 10%** by leveraging Amazon S3 storage
- Implemented paperless refunds with AWS SQS, reducing **turnaround time by 90%** for unsuccessful applications

ACADEMIC PROJECTS

Cloudapi (AWS : S3, Lambda, SES, SNS, RDS, Cloudwatch, Cloudformation, NestJs)

2022

- IaaS(Infra as a Service) capable of serving hundreds of thousands of users. Load tested with Mocha testing suite.
- Implemented flexible data storage using AWS RDS MySQL and ensured secure file storage via AWS S3.
- Orchestrated an event driven email notification with AWS Lambda and SES, while optimizing resource allocation through proactive autoscaling based on traffic patterns, resulting in a seamless user experience.

Quizly (Java, Mongo DB, JavaFx)

2023

- Implemented abstract factory pattern, Object-oriented design paradigms, and leveraged JavaFX for UI development
- Integrated third-party Api including Twilio for notifications and JxBrowser for location and browser window services

SKILLS

Languages: Go, Java, Python, JavaScript (ES6+), TypeScript, SQL, NoSQL, YAML, HTML, CSS

Frameworks & Tools: Node.js, React, Redux, Angular, AI Agents, LangChain

Containers & Infra: Docker, Finch, nerdctl, Kubernetes, AWS CDK, GitHub Actions

Cloud & Services: AWS (S3, Lambda, RDS, SQS, EventBridge, CodeBuild, CodePipeline, QuickSight, Secrets Manager, CloudFormation)

Databases: PostgreSQL, MySQL, MongoDB, MSSQL

Practices: CI/CD, IaC, Observability, Agile Development
